

The low back W6 GRP car seat is a wider hand laminated version of the W5 and is made for drivers over 100 kg. The seat is supplied in a single skin form, therefore it must have special bespoke brackets made in order to fit it to various vehicles. The seat has an interim back angle between a typical formula car and saloon car. An option with the W6 is a Dinamica suede panel set. The suede panels are thin and light and can be specially ordered to be removable using Velcro. Three seat belt harness holes are included as standard.
